

10 reasons why Pitch-Rail outperforms conventional pushback cart systems

- 1) storage lanes up to 8 pallets deep
- 2) can be installed with shims on existing racks (no special beams required)
- 3) uses less vertical height
- 4) lower cost especially for lanes 4 pallets deep+
- 5) no carts that can potentially block or derail
- 6) less time to install
- 7) storage lane can hold different size pallets
- 8) can handle large, non-standard size loads
- 9) rust-proof (no extra cost)
- 10) tracks can be modified to manage non-palletized material

EXGLOBE – high density pallet storage systems

Manufacturer of the Pitch-Rail pushback system

www.exglobe.ca

Sold by the best material handling dealers / system integrators across the U.S. and Canada.

Pitch-Rail is an inclined roller track system with no brakes – pallets loaded/unloaded from the same side of the rack structure. 2" nylon polyester rollers with 3" center-to-center spacing
